ansys mechanical products brochure - the trusted ansys mechanical suite rapidly solves complex structural problems with ease. confidently predict and optimize how your product will behave with ansys advanced physics.

actively cooled battery packaging using vascular composites - protection. as a whole, the packaging is quite complex and accounts for about half of the weight of the battery assembly. here we propose a novel packaging scheme that uses microvascular fiber-reinforced composites. batteries will be embedded within structural composites that contain channels near the battery surface for coolant flow (see fig. 2). the channels will be formed in the composites ...

packaging towards a circular economy - pac home - packaging design, including material selection, structural design and on-pack communication capture the stage in which the consumer discards the material for collection at curbside, depot or return-to-retail to be sorted and baled at a mrf recovery the stage in which baled materials are then sold to end markets that process the materials to make new products or alternative feedstocks (e.g ...

flexible packaging - stress engineering innovation - material in bending often introduces structural instabilities, wrinkles and complex contact situations that are very challenging to simulate. case studies that follow demonstrate the current simulation technology's readiness and predictive capability in flexible packaging applications. case 6: pouch tear-opening simulation consumers become annoyed when tear opening features fail (figure ...
